

Payment Infrastructure for High-Stakes Disbursement

Engineered to ensure payment is correct, secure, and fully raceable.

NOT PAYMENT PROCESSING

PAYMENT INTEGRITY

Most systems focus on **sending payments**.

We **ensure they are correct before release**
and **traceable after**.

In high-risk environments, the failure isn't speed.
It's sending the **wrong** payment.

HOW IT WORKS

Validate Before Funds Move

Identity, eligibility, and account ownership verified before disbursement.

Orchestrate Secure Disbursement

Execute across ACH, virtual cards, and checks with centralized control.

Track Every Transaction

Real-time visibility, full audit trails, and verified confirmation.

BUILT FOR CONTROL

- Multi-modal payment execution (ACH, virtual card, check)
- FBO account structures for fund control
- Automated reconciliation and reporting

USE CASES

- Disaster relief and emergency disbursements
- Grants and benefits distribution
- Insurance and claims payments
- Enterprise payment programs

Every payment **validated before release**.
Every transaction **fully traceable after**.

Trusted payments are engineered.

Can you prove every payment was correct?
